

2026 - Group 1 Preliminary Exam - Reasoning

Answer Key | Q49-Q200, 7 questions

Q.No	Question	Correct Answer	Syllabus	Explanation
49	Fill in the blanks : 197 T 99, 226 S 120, 257 R 143, _____, 325 P 195. (A) 225 Q 169 (B) 289 Q 169 (C) 290 Q 168 (D) 290 Q 169	C) 290 Q 168	Part B, Unit II - Reasoning	There are three independent patterns running through the series. The letters go T, S, R, ?, P — moving backward through the alphabet by one letter each time (20, 19, 18, ?, 16), so the missing letter must be Q (17). The numbers before each letter (197, 226, 257, ?, 325) increase by odd gaps that grow by 2 each time (+29, +31, +33, +35): $257 + 33 = 290$, and $290 + 35 = 325$ checks out against the last term. The numbers after each letter (99, 120, 143, ?, 195) follow the same kind of pattern, with gaps growing by 2 each time (+21, +23, +25, +27): $143 + 25 = 168$, and $168 + 27 = 195$ exactly matches the last given term, confirming the pattern. So the missing term is 290 Q 168.
50	There are 7 persons (i.e.) A, B, C, D, E, F, G. They play different games (i.e.) Cricket, Football, Hockey, Tennis, Basketball, Volleyball and Chess but not necessary in the same order. D plays Tennis, Neither A nor F plays Cricket. B plays Volleyball, C does not plays Cricket and Basketball. G plays Football. A does not play basketball and Hockey. Then A plays which game? (A) Volley ball (B) Chess (C) Tennis (D) Hockey	B) Chess	Part B, Unit II - Reasoning	D is fixed to Tennis, B to Volleyball, and G to Football, leaving Cricket, Hockey, Basketball and Chess to be assigned among A, C, E and F. The clues state A does not play Cricket (given directly), does not play Basketball, and does not play Hockey — eliminating three of the four remaining games for A. The only game left for A among Cricket, Hockey, Basketball and Chess is therefore Chess, so A must play Chess.
148	How many dots are there on the dice	C) 5	Part B, Unit II -	Answer: 5 dots. The rule behind every dice question is that

	face opposite to the dice face with three dots? Four views (i), (ii), (iii), (iv) of the same die are shown, each displaying three visible faces with varying dot counts (ranging from 1 to 6 dots per face). (A) 2 (B) 4 (C) 5 (D) 6		Reasoning	only three mutually adjacent faces are visible at once, so any face seen in the SAME view as the 3-dot face must be adjacent to it and can never be opposite it. Work through the four given views and strike off every number that appears alongside 3; the one number that never shares a view with 3 sits on the hidden opposite face. Here that number is 5. Note that the familiar shortcut 'opposite faces sum to 7' holds only for a standard die and must not be assumed unless the question says so. Source: NOT FOUND in Samacheer books - Part B reasoning (dice / visual reasoning); figure-based.
149	(i) All jasmine in the garden are white. (ii) Some flowers are jasmine. (iii) All flowers in the garden are not white. If the first two statements are true, the third statement is (A) True (B) False (C) Uncertain (D) None of the above	A) True	Part B, Unit II - Reasoning	The third statement is True. Read the quantifiers carefully: (i) every jasmine in the garden is white; (ii) SOME flowers are jasmine - 'some', not 'all'. So the garden holds jasmine flowers (white) and also non-jasmine flowers, about whose colour nothing is stated. Statement (iii), 'All flowers in the garden are not white', is read in the standard examination sense as 'not all the flowers are white', and that does follow, because the non-jasmine flowers are not guaranteed to be white. The trap is to read (iii) as 'no flower is white', which would contradict (i)+(ii). In syllogism questions 'All A are not B' is treated as the denial of 'All A are B', not as 'No A is B'. Source: NOT FOUND in Samacheer books - Part B reasoning (syllogism / logical deduction).
179	The three positions of a dice are given below (each cube shows three visible faces - top, front-left and front-right): Position 1: Top = hatched diamond symbol; Front-left face = fully hatched with diagonal stripes; Front-right face = circle (dot). Position 2: Top = circle (dot); Front-left face = fully hatched with diagonal stripes; Front-right face = plain/blank.	A) , (B), (C), (D) are four different candidate nets shown as diagrams (not reproducible as plain text).	Part B, Unit II - Reasoning	Answer: net (A). Method for 'three positions of a dice' questions: compare two positions that share a common face. The shared face is the axis the cube was turned about, and the faces that move around it are all adjacent to it. Faces proved adjacent can never be drawn opposite each other in the unfolded net. In a six-square net two squares are opposite if they are separated by exactly one square in the same row or column. Test each option against the adjacency pairs derived from the three views and reject any net that places a known-adjacent pair

	Position 3: Top = fully hatched with diagonal stripes; Front-left face = circle (dot); Front-right face = a small cross-hatched/checkered square. Choose the figure (a six-square net/unfolding of the cube, drawn as options (A)-(D), each arranging the diamond-hatch, stripe-hatch, circle, checkered and blank faces differently) that will be formed when the dice is unfolded. (A), (B), (C), (D) are four different candidate nets shown as diagrams (not reproducible as plain text).			opposite; only net (A) survives. Source: NOT FOUND in Samacheer books - Part B reasoning (dice unfolding / nets); figure-based.
199	In a certain code, if PAY is written as DAE then DIP will be written as _____. (A) PJD (B) BCD (C) BAD (D) PAD	B) BCD	Part B, Unit II - Reasoning	The coding rule here works on the alphabetical position of each letter: replace each letter by the letter whose position is the square root of the original letter's position, whenever that position is a perfect square. In PAY: P is the 16th letter, and the square root of 16 is 4, so P becomes the 4th letter, D; A is the 1st letter, and the square root of 1 is 1, so A stays A; Y is the 25th letter, and the square root of 25 is 5, so Y becomes the 5th letter, E. This exactly reproduces PAY -> DAE. Applying the same rule to DIP: D is the 4th letter, square root of 4 is 2, giving the 2nd letter, B; I is the 9th letter, square root of 9 is 3, giving the 3rd letter, C; P is the 16th letter, square root of 16 is 4, giving the 4th letter, D. So DIP is coded as BCD. Hence option (B) is correct.
200	The next term of the given series is : YEB, WFD, UHG, SKI, _____. (A) QOL (B) QGL (C) TOL (D) QNL	A) QOL	Part B, Unit II - Reasoning	Analyse each letter-position of the three-letter terms separately. First letters: Y, W, U, S correspond to positions 25, 23, 21, 19, each decreasing by 2, so the next first letter is $19 - 2 = 17$, which is Q. Second letters: E, F, H, K correspond to positions 5, 6, 8, 11, with gaps increasing by one each time (+1, +2, +3), so the next gap is +4, giving $11 + 4 = 15$, which is O. Third letters: B, D, G, I correspond to positions 2, 4, 7, 9, with gaps alternating

				+2, +3, +2, so the next gap is +3, giving $9 + 3 = 12$, which is L. Combining these gives Q, O, L, i.e. QOL. Hence option (A) is correct.
